

Vehicle to Everything (V2V, V2I, V2X, C2C, C2X)

R&S test solutions for Automotive

GNSS / eCall

R&S[®]SMBV R&S[®]CMW

GNSS Simulation Solutions

This panel displays two R&S test instruments, the R&S[®]SMBV and R&S[®]CMW, against a background of a car's navigation system and a cityscape at night.

EMC

R&S[®]TS9982 R&S[®]SMB100A R&S[®]FSW R&S[®]NRP
R&S[®]ESRP R&S[®]ESW R&S[®]RTO
R&S[®]BBA

Complete EMC measurement solutions.

This panel features a collection of R&S EMC test equipment, including the R&S[®]TS9982 rack system, R&S[®]SMB100A, R&S[®]FSW, R&S[®]NRP, R&S[®]ESRP, R&S[®]ESW, R&S[®]RTO, and R&S[®]BBA. The background shows a car and a stylized grid pattern.

Audio / Video / Infotainment

R&S[®]BTC R&S[®]SFE100 R&S[®]CMW
R&S[®]UPV R&S[®]VTC R&S[®]SMBV
R&S[®]UPP R&S[®]RTO

Evaluate the quality of infotainment systems

This panel displays various R&S test instruments for audio, video, and infotainment systems, including R&S[®]BTC, R&S[®]SFE100, R&S[®]CMW, R&S[®]UPV, R&S[®]VTC, R&S[®]SMBV, R&S[®]UPP, and R&S[®]RTO. The background shows a car's infotainment screen and a steering wheel.

Automotive Radar Solutions

R&S[®]FSW R&S[®]ZVA110 R&S[®]SMW
R&S[®]SMF R&S[®]ARTS R&S[®]SMZ

Verification of Driver Assistance Systems

This panel shows R&S test equipment for radar solutions, including R&S[®]FSW, R&S[®]ZVA110, R&S[®]SMW, R&S[®]SMF, R&S[®]ARTS, and R&S[®]SMZ. The background features a car's radar sensor and a road scene.

Car2Car / Car2X

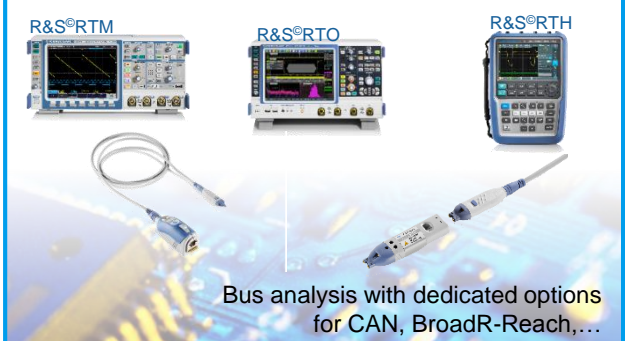

R&S[®]TS-ITS100 R&S[®]SMW R&S[®]FSW
R&S[®]CMW R&S[®]FSWP

Communication and Interference

This panel displays R&S test equipment for Car2Car and Car2X solutions, including R&S[®]TS-ITS100, R&S[®]SMW, R&S[®]FSW, R&S[®]CMW, and R&S[®]FSWP. The background shows a multi-lane highway with cars.

Automotive Bus Systems

R&S[®]RTM R&S[®]RTO R&S[®]RTH

Bus analysis with dedicated options for CAN, BroadR-Reach,...

This panel features R&S test equipment for automotive bus systems, including R&S[®]RTM, R&S[®]RTO, and R&S[®]RTH. The background shows a car's bus system components and a stylized grid pattern.

V2X Communications

- I A car2car module of the following components:
802.11p chip, 2 tx/rx antennas (to avoid package losses), GNSS receiver and CAN / USB interface.

Source: cohdawireless.com

- I General T&M Requirements:
 - I Repeatability (not only drive tests)
 - I Generation and Analysis of 2 x 5.9 GHz 11p test signals
 - I PER testing
 - I Multipath simulation

What do we need to test in R&D?

[More Detail](#)

Goal: Verify basic receiver and transmitter performance in a realistic but repeatable environment including fading.

■ Transmitter

- Channel Power ACLR
- Spectrum Emission Mask
- Occupied Bandwidth
- CCDF

■ Receiver

- Minimum input sensitivity (sensitivity of the DUT at very low input levels)
- Maximum Input Level (demodulate an 11p signal with a high input level)
- Adjacent and Nonadjacent channel rejection (demodulate a signal in the presence of an interfering signal)

Rx Quality Analysis

R&S®WinIQSIM2

Configuration of 802.11 waveforms

The screenshot shows the configuration interface for 802.11 waveforms in R&S WinIQSIM2. The interface includes several configuration fields and a diagram of the frame structure.

Configuration fields:

- PSDU Bit Rate (OFDM): 54 Mbps
- PSDU Modulation: 64-QAM
- Data Length: 1024 bytes
- Number of Data Symbols: 39
- PSDU Data Source: PRBS 9
- Scrambler: On (User Init)
- Scrambler Init (hex): 01
- Interleaver Active:
- Service Field (hex): 0000
- Time Domain Windowing Active:
- Transition Time: 100 ns

Diagram of the frame structure (IEEE 802.11g WLAN):

Field	Length
Rate	4 Bbs
Reserved	1 Bb
Length	12 Bbs
Parity	1 Bb
Tail	6 Bbs
Service	10 Bbs
PSDU	8 Bbs
Tail	6 Bbs
Pad Bbs	6 Bbs

Simulation Mode: Framed

802.11 a/b/g/n/j/p (option KW650)
802.11 ac (option KW656)

Tx Measurements

Standard RF measurements:

- Power Measurements:
 - Burst Power
 - Power vs. Time
- Modulation Accuracy:
 - EVM
 - Frequency Error
 - Symbol Clock error
 - Chip Clock Error
 - I/Q quality
- Spectrum Analysis:
 - Spectral Flatness
 - Transmit spectrum mask
 - Occupied bandwidth

802.11 a/b/g (option KM650)
802.11n (option KM651)
802.11p (option KM655)
802.11 ac (option KM656)

Pre-compliance and Compliance Testing?

[More Detail](#)

Goal: Verify the device passes the necessary conformance requirements

- Standard compliance
- Regulator compliance

TS-ITS100 - System software (Europe)

Regulatory tests according to R&TTE* ETSI EN 302 571

ITS-G5A Test Cases

- 5.3.2.3.2 Carrier Frequencies
- 5.3.3.3.2.1 RF output power at the highest level
- 5.3.3.3.2.2 Power Spectral Density
- 5.3.4.3.2 Unwanted emissions outside 5 GHz ITS band
- 5.3.5.3.2 Unwanted emissions inside the 5GHz ITS bands
- 5.3.6.3.2 Spurious Emissions
- 5.3.7.3.2 Selectivity
(contains Adjacent, Non-adjacent and Blocking test case)
- 5.3.8.3.2 Sensitivity

Available on TS-ITS100

Testing to protect other regular radio services

TS-ITS100 - System software (Europe)

Car-2-Car Communication Consortium (C2C-CC)

Performance tests

- To ensure proper services additionally **performance tests** are required
- ETSI and C2CCC (ETSI TC ITS WG4) are discussing currently the specification of such performance tests inclusive a certification program
- Tests under discussion for
 - Receiver minimum performance requirements
 - Receiver sensitivity (under fading conditions)
 - Decentralised congestion control (DCC) minimum performance requirements
 - Channel load threshold verification
 - Channel load measurement accuracy
 - Channel load quality under time-varying, multipath propagation conditions

Available on TS-ITS100

Available on TS-ITS100

TS-ITS100 - System software (Japan)

Regulatory tests according to ARIB STD-T109

2.1 The test item for the technical requirements for the physical layer

- 2.1.1 Modulation accuracy
- 2.1.2 Reception sensitivity (Packet error rate)
- 2.1.3 Maximum input power for reception
- 2.1.4 Blocking characteristics

Available on TS-ITS100

TS-ITS100 - System software (Japan)

Regulatory tests according to TELEC T257

1 The test item for the technical requirements for the physical layer

- 1.1.1 Frequency tolerance
- 1.1.2 Occupied bandwidth
- 1.1.3 Antenna power tolerance
- 1.1.4 Intensity of spurious or unwanted emissions
- 1.1.5 Transmission data rate
- 1.2.1 Limits of incidentally produced radiation
- 1.3.1 Interference prevention function
- 1.3.2 Carrier sense function
- 1.3.3 Transmission time control function

Available on TS-ITS100

TS-ITS100 - System software (USA)

Test cases according to IEEE 802.11-2012

- 18.3.9.2 Transmit power levels
- 18.3.9.3 Spectrum Mask
- 18.3.9.4 Transmission spurious
- 18.3.9.5 Center frequency tolerance
- 18.3.9.6 Symbol clock frequency tolerance
- 18.3.9.7.2 Transmitter center frequency leakage
- 18.3.9.7.3 Transmitter spectral flatness
- 18.3.9.7.4 Transmitter constellation error
- 18.3.10.2 Receiver minimum input sensitivity
- 18.3.10.3 Adjacent channel rejection
- 18.3.10.4 Nonadjacent channel rejection
- 18.3.10.5 Receiver maximum input level
- 18.3.10.6 CCA requirements
(depends on the availability of CCA values in the DUT API)
- 18.3.10.7 Received Channel Power Indicator Measurement

Available on TS-ITS100

Research & Development

- Transmitter tests
- Receiver test

Design & Validation

- RF Parametrics
- Co-existence
- Functionality
- Performance
- Power analysis

Pre-Compliance & Compliance

- Standard compliance
- Regulator compliance

Manufacturing

- Go / NoGo

What do we need to test in Production?

[More Detail](#)

Goal: Automated verification of device function, at the end of the manufacturing process.

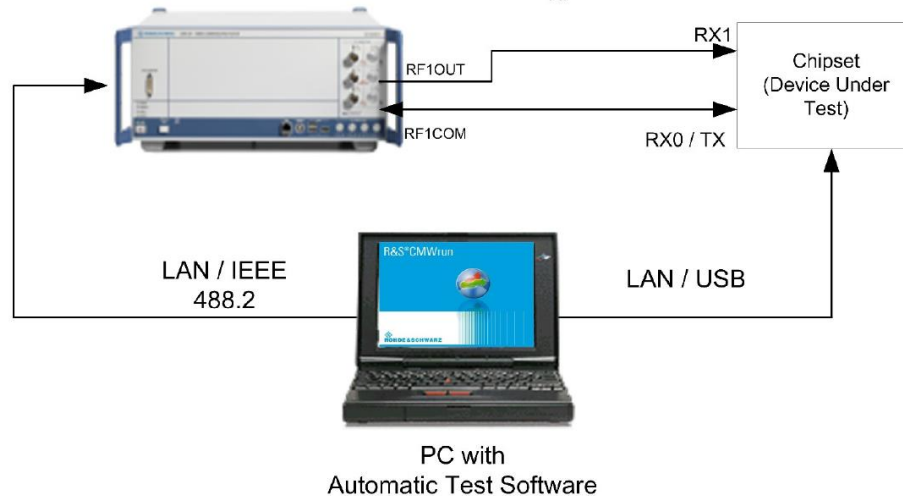

- Reference Calibration Tests
 - RSSI parameter
 - TX Output power
 - Flexible settings of frequencies
- Reference Verification Tests
 - RSSI
 - CINR
 - Constellation Error (EVM)
 - TX Output PowerGo / NoGo

- Go/No Go

What do we need to test in Production?

More Detail

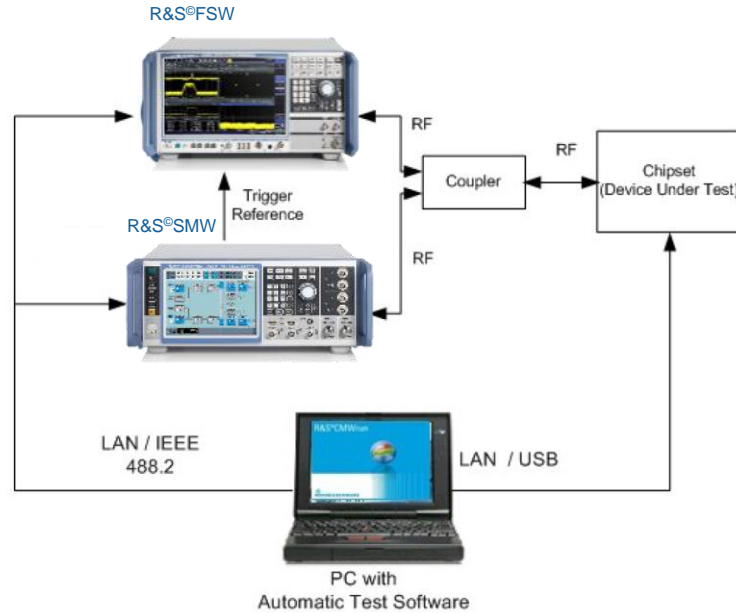

The Communication Tester combines signal analysis and signal generation in a single instrument. For time optimized RF calibration in non-signalling mode, the tester provides fast transmitter measurements and a versatile arbitrary waveform generator for receiver testing.

What do we need to test in Production?

More Detail

An alternative setup is based on Spectrum Analyzer and a Signal Generator remote-controlled via IEEE 488.2 (GPIB) or LAN.

R&S test solutions for Automotive

GNSS / eCall

R&S[®]SMBV R&S[®]CMW

GNSS Simulation Solutions

This panel features two R&S test instruments, the R&S[®]SMBV and R&S[®]CMW, displayed against a background of a car's navigation system and a cityscape at night.

Automotive Bus Systems

R&S[®]RTM R&S[®]RTO R&S[®]RTH

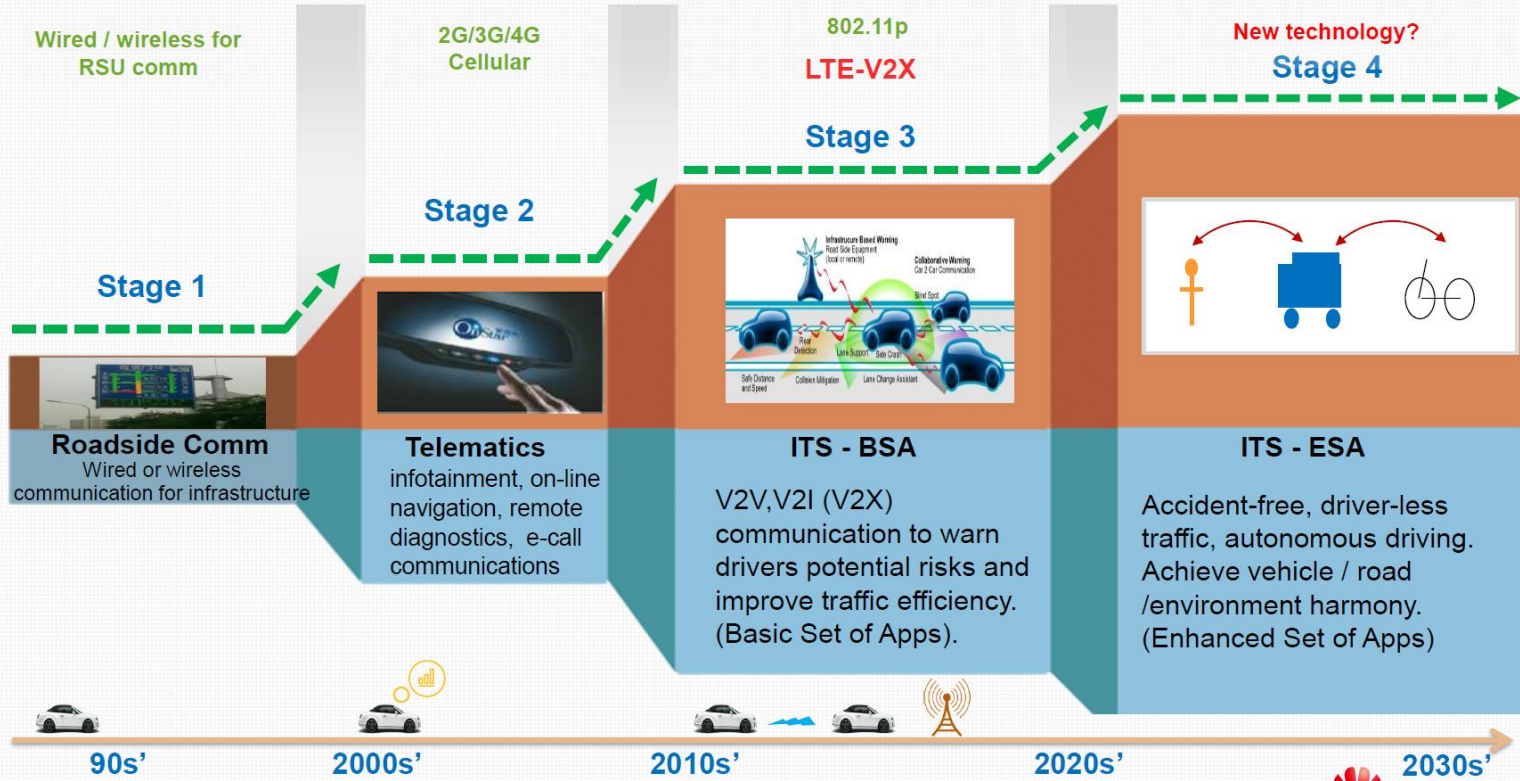

Bus analysis with dedicated options for CAN, BroadR-Reach,...

This panel displays R&S test equipment for automotive bus systems, including the R&S[®]RTM, R&S[®]RTO, and R&S[®]RTH. The background shows a car's bus system and a stylized grid pattern.

The Technology behind V2X

Index

ITS Stages and Key Communication Technologies

Vehicle-to-Vehicle (V2V) Communication Today

**Ad-hoc network
(IEEE 802.11p)**

**Cellular network
(GSM, UMTS, LTE)**

ITS and 802.11p

Intelligent Transportation System (ITS)

summarizes applications for traffic management as Car-to-X or navigation. Target is to make

- road user better informed
- traffic safer
- traffic more coordinated

Car-to-X (Vehicle-to-X), communication based on 802.11p

- between vehicles (Car-to-Car / Vehicle-to-Vehicle)
- with roadside units
- with motorcycles
- with bicycles
- with pedestrians (e. g. apps on mobile phones)

ITS and 802.11p

IEEE 802.11p – technical facts

- amendment to IEEE 802.11a standard (published 2010)
- mobile ad-hoc network (WLAN) w/o central infrastructure
- no signalling or authentication
- only broadcast mode on a 10 MHz channel

supports data exchange between high-speed vehicles and between vehicles and roadside infrastructure (required by ITS)

fulfills requirements for safety applications because of low latency

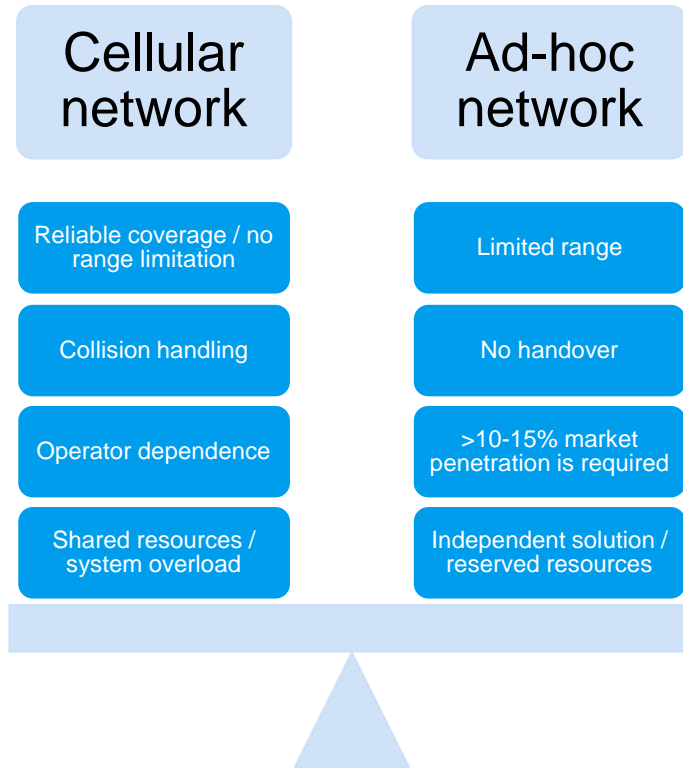

R&S Signal Generators for 802.11p

802.11p Fading Profiles:

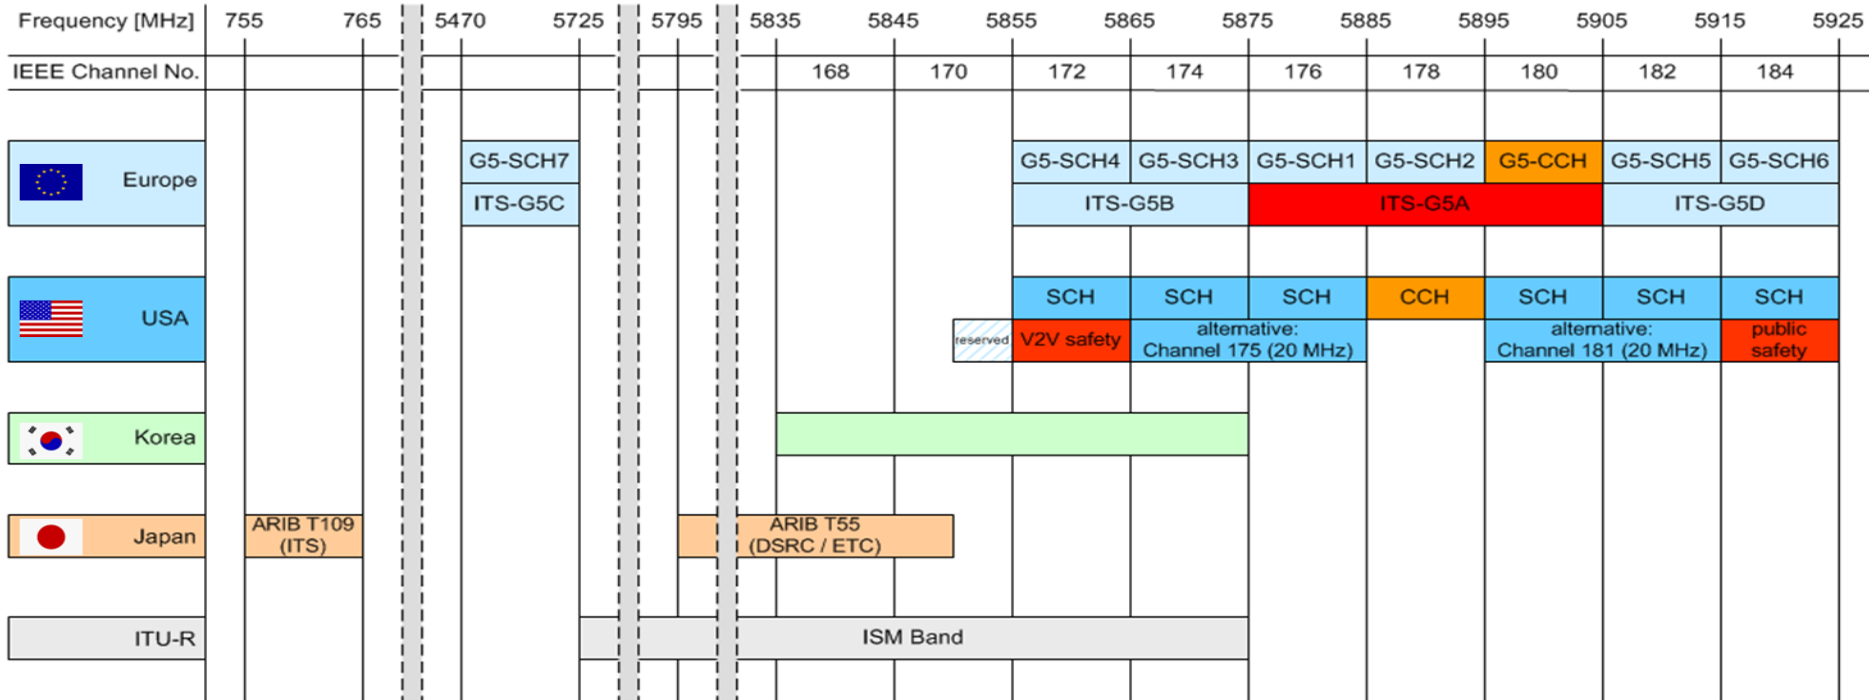

- 802.11p operates in fast moving environments
- Receiver tests under fading conditions are important

- ETSI is adding test cases for fading to the standard
- Same fading profiles as used in ETSI plugfest in Nov. 2013, where R&S took part
- **R&S SMW-200A will support these special fading profiles.**

V2V Communication System Comparison

Worldwide Frequency Allocation

Network-Controlled Ad-Hoc Network

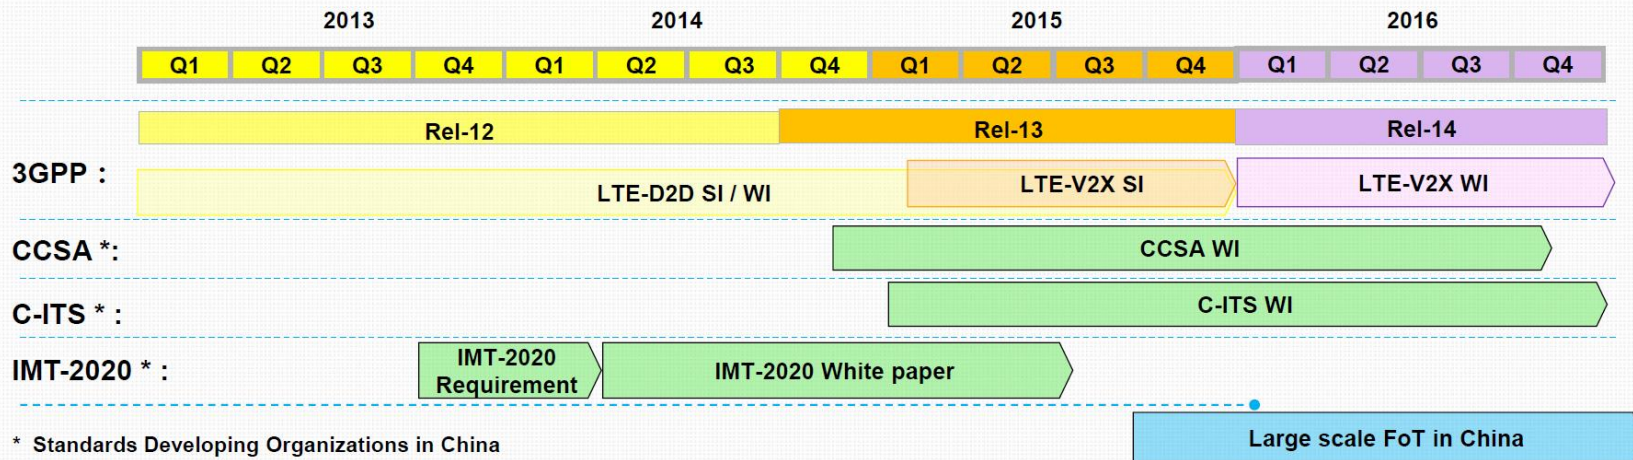

⇒ Unifies the advantages of both concepts

⇒ Allows to select appropriate air interface for application

Rel-13 Sidelink enhancements

LTE-V2X Standardization Progress

- LTE-D2D has paved the way for V2X communication
- 3GPP SA1 has started Rel-14 LTE-V2X SI from 2015 Feb with most companies' support.
- 3GPP RAN has started LTE-V2X SI from June 2015, V2V part to complete in 2015, the rest in 2016 (Rel-14)
- In China, a series of LTE-V2X SI/WI have been setup at CCSA and C-ITS.
- LTE-V2X is the first step for V2X in 3GPP. When it comes to 5G, even lower latency and higher reliability will be supported

TS-ITS100 - System software (Europe)

Available on TS-ITS100

C2C scenario specific channel models for receiver performance tests under real world conditions (fading)

Rural LOS:

Intended primarily as a reference result, this channel applies in very open environments where other vehicles, buildings and large fences are absent.

Urban Approaching LOS:

Two vehicles approaching each other in an Urban setting with buildings nearby.

Street Crossing NLOS:

Two vehicles approaching an Urban blind intersection with other traffic present. Buildings/fences present on all corners.

Highway LOS:

Two cars following each other on Multilane inter-region roadways such as Autobahns. Signs, overpasses, hill-sides and other traffic present.

Highway NLOS:

As for Highway LOS but with occluding trucks present between the vehicles.
