Source: Counterpoint Research Global Cellular IoT Connections Tracker, May 2023

Rohde & Schwarz

The global cellular IoT connections installed base is expected to surpass 6 billion by 2030 with a CAGR of 10.8%. The growth will be mainly driven by cellular connectivity adoption across various sectors such as utilities, automotive, industrial, retail and healthcare.

Unlike the previous decade, where consumer devices like smartphones and PCs played a significant role in driving cellular connections, this decade will see a shift towards cellular connections propelled by the digital transformation initiatives undertaken by enterprise IoT payers.

Highlights of cellular IoT connections installed base:

- Global cellular IoT connections grew 29% YoY to reach 2.7 billion in 2022 with 4G continuing to grow its majority share.
- China held over two-thirds of cellular IoT connections in 2022, followed by Europe and North America.
- NB-IoT dominates in China, while LTE-M is preferred in Australia, Japan and North America; Europe supports both.
- 4G and NB-IoT are the most preferred cellular IoT applications technologies.
- 5G is nascent as module prices and breadth of applications reflect early-stage dynamics.
- IoT growth drivers are shifting, with the enterprise and transformation initiatives key in propelling IoT connections forward.

#### **RedCap PRs**

#### Munich / 14-Feb-2023

#### Leading chipset manufacturers test and verify 5G RedCap using R&S CMX500 in R&D and type approval stages

Rohde & Schwarz helps Tier 1 chipset manufacturers around the globe to verify 5G RedCap (Reduced Capabilities) and other 3GPP Release 17 features of their products. The tried and tested R&S CMX500 5G one-box signaling tester (OBT) can be used across the whole value chain, from early R&D to type approval conformance testing. At Mobile World Congress 2023 in Barcelona, Rohde & Schwarz is showcasing its radio communication tester in the new R&S CMX500 0BT lite hardware configuration, tailored specifically for lower data rate applications like 5G RedCap.

#### . Munich / 01-Jun-2023

#### Rohde & Schwarz takes lead in number of GCF-validated 5G RedCap conformance test cases

Rohde & Schwarz has successfully validated 5G RedCap (reduced capability) test cases for its R&S CMX500 one-box signaling tester and R&S TS8980 conformance test system for the recent Conformance Agreement Group (CAG) #74 meeting, allowing the Global Certification Forum (GCF) to activate the respective work items in their device certification program. Manufacturers of IoT chipsets, modems and end devices as well as test houses can now rely on tried-and-tested Rohde & Schwarz solutions for 397 5G RedCap test cases in all device production stages, from early R&D to type approval conformance testing.

#### R&S联合紫光展锐在MWC共同展 示RedCap测试方案

原创 罗德与施瓦茨中国 罗德与施瓦茨中国 2023-06-29 11:54 发表于上海

3GPP Rel17核心规范已经于2022年6月冻结,而 RedCap 无 發 是 Rel17 非 常 重 要 的 特 性 之 一。 RedCap 定义的初衷是为了进一步降低终端复杂度 和成本。

RedCap在功耗,成本以及覆盖方面略进与NB-IoT 和LTE-M,但是在速率,可靠性和延迟方面都要优 于NB-IoT和LTE-M。因而RedCap的应用适用于较 低复杂度和较优功耗要求的场景、比如工业无线传 感器,视频监控和可穿戴设备等。

和11年48、電量性速度、可量性的高度含量量化 于ND-IのT和11年48、医胃ReadCap的品质增速用于13 位置角层和微能的局面来的结晶,比如工业无能传 感望,我纳益型如可穿着设备等。

#### **TECHNICAL ASPECTS OF TESTING REDCAP DEVICES**

# **DEVICE OPTIMIZATION**

Reduced capability (RedCap)

- 20 MHz (FR1), 100 MHz (FR2)
- 1 or 2 RX (more complex in reality: MIMO, FR1/2 etc.)
- 256QAM optional (FR1)
- Half duplex FDD (but full-duplex is optional)
- Lower transmit power (e.g. power class 7 for some bands in FR2)
- Limited mobility/handovers (e.g. low mobility devices, relaxed RRM)

### **DEVICE OPTIMIZATION**

- Half duplex FDD type A (full duplex optional)
- ► No support for: CA, MR-DC, DAPS, CPAC and IAB → only NR-SA

### **DEVICE OPTIMIZATION**

Other R15-17 features may be used by a RedCap device, but they may not be optimized for them

| "useful ?"                          | "maybe not useful?" |

|                                     |                     |

## **5G NR REDCAP: System Information Broadcast**

# **5G NR REDCAP: Cell Barring**

Network can restrict access on cell level! Specific for RedCap features! But: There is no "RedCap-only" cell!

No RedCap IAB node

Cell barred for 1RX UE only

Cell barred for 2RX UE only

Cell barred for half-duplex UE (HD-UE)only

SIB1

Barred cell may use intra frequency reselection RedCap field to assist reselection

#### NR Evolution – Reduced Capabilities (RedCap) + Power Saving 5G NR REDCAP: Bandwidth Parts (BWP)

Network schedules a BWP common for all UEs. Drawback is that this BWP is not allowed to be larger than the UE capability (e.g. RedCap UE has no access)!

Optionally, the network schedules a BWP specific for RedCap UEs. Drawback: This BWP needs to cover the UE bandwidth, otherwise cell is considered as "barred".

Optionally, the network may configure a dedicated DL BWP (either way RedCap or non-RedCap UEs) => higher flexibility to adjust BWP to UE needs.

#### **5G NR REDCAP: Early Indication**

21 Rohde & Schwarz

### **5G NR REDCAP: HD-FDD Operation**

Although a FDD band is used a HD-FDD UE can not send and receive at the same time
 → gNB should take care, but collisions still may occur
 → collision handling rules required → 38.213 17.2

#### **TESTING REDCAP DEVICES WITH R&S®CMX500**

# RedCap on OBT

- ► R&S<sup>®</sup>CMX500 OBT lite
- ► LTE, 5G NR FR1, WLAN
- Optimum configuration for 3GPP R17 RedCap RF parametric and functional test, protocol analysis and application testing
- Supports FR1/LTE 4x4 MIMO RF callbox testing
- ► 3GPP pre-conformance
- Data application testing
- ► 4 GHz RF DL iBW
- ► Sub8: 400 MHz 8 GHz

# **Power Consumption Testing**

# **R&S<sup>®</sup>CMX500 (TP 292) Validation Status**

#### GCF (CAG#74) and PTCRB (PVG#100)

- Total 547 individual EN-DC and NR PCT test cases validated
- Currently **521** TC validated at PTCRB
- > 10500 band combinations in GCF,
- > 7800 band combinations in PTCRB
- R&S PCT is leading in individual TC validation
- R&S PCT is leading in R16 GCF validation
- R&S is leading in RedCap validation with R17 and R15 RedCap variant TCs

#### Demo

- ► R&S<sup>®</sup>CMX500 OBT lite
- CMsquares User Interface
  - Callbox
  - Sequencer
  - Scripting
